

A growing population and increasing wealth cause greenhouse gas emissions from the food supply chain to rise. This conflicts with the worldwide goal to keep global warming under 2° Celsius.

**14 Gigatons
per year**

**5 Gigatons
per year**

In order to prevent more harm, our food-related emissions need to drop by 60%.

**By being just a few years late,
displacement and destruction from
global warming is expected to be worse
than all wars in human history
combined.**
